PROFILE

Professional with 15 years of experience driving business impact through analytics in technology companies. Proven track record of partnering with product teams to define KPIs, build models, and deliver actionable insights that lead to quantifiable results. Expert in end-to-end analytics solutions, including instrumentation, modeling, visualization and storytelling.

EXPERIENCE

STAFF PRODUCT DATA SCIENTIST, MOZILLA – 2022-2025

DATA SCIENCE MANAGER, MOZILLA – 2025-2026

Data analytics for Firefox browser teams focused on productivity and AI features, directly supporting product decisions that impact millions of users. Partner closely with Product Managers, Engineers, and UX team to measure impact and translate complex user behavior data into actionable insights through reports, comprehensive dashboards, statistical analyses, and experiments. Past initiatives include validating and improving our KPI definitions and pipelines; using machine learning to create an early indicator of lifetime value that enhanced user acquisition strategies; and executing geo tests to measure and increase Marketing ROI.

STAFF DATA SCIENTIST, SHOPIFY – 2020-2021

Support initiatives for Shopify's Theme Store and App Store platforms, serving developer partners, merchants and customers. Established key metrics appropriate for each project, created data models to support our reports and exploratory analyses, implemented a tracking strategy to better understand how users interacted with each surface, executed experiments, built dashboards, and helped uncover data insights. In addition, as a technical lead, I contributed to initiatives to improve how Data Science teams operate across the organization: I had been championing data discovery projects and documentation since 2017, running workshops to teach SQL, and defining best practices and standards for how we communicate with data.

DATA SCIENCE LEAD, SHOPIFY – 2012-2019

Built foundational marketing analytics infrastructure supporting Shopify's growth from 20K to 800K+ merchants during critical IPO expansion. Led technical architecture decisions for enterprise-scale data warehouse implementation, managing both hands-on development and stakeholder requirements. Directed team initiatives including real-time data collection via Kafka, external API integrations, PySpark-based data modeling, and dashboards in Tableau and Mode Analytics. Transitioned from manager to a technical lead role in 2017, identifying and addressing scaling challenges across multiple data science teams, defining new standards, sharing knowledge, and creating tools to optimize how we worked.

MARKETING INTELLIGENCE MANAGER, DAFITI – 2010-2012

Led marketing analytics for Dafiti during hypergrowth phase, supporting expansion from startup launch to Latin America's largest fashion ecommerce platform in under two years. Designed and implemented comprehensive measurement frameworks for multi-channel marketing campaigns, including end-to-end tracking architecture from website instrumentation to campaign attribution modeling. Established data collection standards across digital touchpoints, ensuring data accuracy and consistency. Delivered actionable insights through integrated reporting that consolidated internal data with external campaign performance metrics, enabling marketing optimization that supported rapid business growth.

SOFTWARE DEVELOPER, BUSCAPÉ – 2010

Development of new features for a comparison shopping website using Java.

SYSTEM ANALYST, UOL – 2009

Development of the billing platform using Java.

LEAD MOBILE PROGRAMMER, DEVWORKS – 2004

Development of games for mobile phones using Java.

SYSTEM ANALYST, ACCENTURE – 2000-2003

Consulting projects for several clients using a variety of technologies.

EDUCATION

Ms. Computer Science – Universidade de São Paulo, 2011

Bs. Computational and Applied Mathematics – Universidade de São Paulo, 2006

Ba. Business Administration – Fundação Getúlio Vargas, 2001

Other Courses

University of Toronto

Certificate in Artificial Intelligence 2025

Interaction Design & Prototyping for XR 2023

University of British Columbia

Creating and Managing the Analytical Business Culture 2011

Measuring Marketing Campaigns Online 2011

TECHNICAL SKILLS

SQL (BigQuery, Presto, Redshift, Vertica)

Data Warehousing (Dimensional Modeling)

Data visualization and reporting (Plotly, Tableau, Looker, Mode, Redash)

Python (Jupyter, Pandas, SciKit Learn, Keras, PySpark)

Google Cloud and Google APIs

HTML, CSS and JavaScript
